

How the Website Should Look (Visual Design & Interface)

- **Minimalist Luxury Aesthetic:** The design will evoke tranquility and high-end sophistication. The color palette will rely on warm off-whites and deep charcoal grays to create elegant contrast. Accent colors will be drawn directly from the metallurgical states of copper, ranging from bright, polished rose-gold to the dark, rustic hues of a peacock patina.
- **Immersive Product Displays:** Product detail pages will feature edge-to-edge, ultra-high-resolution image galleries with deep zoom capabilities. This allows customers to closely inspect the unique indentations of the hand-hammered surfaces, reinforcing the artisanal value of the product.
- **Typography & Animations:** Navigation and functional UI elements will use clean, geometric sans-serif fonts for maximum legibility, while large editorial headlines will use elegant serif fonts to convey heritage and authority. The site will also employ smooth micro-interactions, such as a physics-based slide-out cart that prevents jarring page reloads when items are added.

How the Website Should Operate (Technical Functionality)

- **Automated Geo-Targeting & Dual Pricing:** Built on a custom WooCommerce architecture, the site will automatically detect a visitor's location using their IP address and dynamically adjust the catalog. Visitors from Nepal will see local, market-adjusted prices in Nepalese Rupees (NPR), while international visitors will see manually fixed, premium prices in USD, EUR, or GBP. A subtle country-switcher widget will allow users to manually override their region if they are using a VPN or buying a gift for someone abroad.
- **Dynamic Payment Routing:** The checkout interface will adapt based on the user's finalized shipping and billing region. International buyers will be presented with global gateways (Stripe, PayPal, Apple Pay, SWIFT), while domestic buyers will securely access local Nepalese payment networks like eSewa, Khalti, and Fonepay through a unified integration.
- **Bespoke Order Tracking:** Once an order is placed, customers will access a dedicated portal that tracks the physical creation of their item. As workshop managers in Nepal update the production phase (e.g., material sourcing, hand-hammering, tin-lining, polishing) via a mobile backend, the system will automatically dispatch narrative-rich email and SMS updates to the buyer.
- **Integrated Wellness Community:** The platform will function as both a store and an educational hub. A seamlessly integrated content management system will host articles detailing the Ayurvedic and scientifically supported health benefits of copper. This space will also feature verified buyer reviews, user-generated content galleries, and a subscription portal for customers who need recurring deliveries, such as replacement filters for copper water dispensers.
